Product Compact Level Switches and Temperature Assemblies
Application Monitoring Temperature and Level on Scrubber Packages
Industry Oil & Gas

Challenge Dragon Products, a world leading manufacturer of compressor packages needed to find a reliable vendor that manufactures quality, worry free level switches and temperature assemblies with on time deliveries that could be used as their standard equipment for their compressor packages. Dragon also needed to partner with a company that could provide service for their products through a worldwide sales representative network. SOR has this capability specifically because of their representatives in North America, South America and other countries all over the world. The product SOR offers can be serviced and supported worldwide and with their great reputation in the Oil and Gas market, SOR is a great fit for Dragon Products.

Solution SOR temperature assemblies (included SETEX thermowells) are used for monitoring compressor cylinder discharge temperature, compressor lube oil temperature and engine lube oil temperature. SOR 1510 electric level switches are used for shut down units on high scrubber liquid level and low engine coolant level. SOR 1540 pneumatic level switches are used to actuate scrubber dump valves to drain scrubbers.
