## 1800 Series Pressure Transmitters

The **1800 Series Pressure Transmitters** are well suited for intrinsically safe applications or conventional transmitter installations. The 1800 Series transmitters utilize an advanced monosilicon pressure sensor and incorporate a patented encapsulation technology to achieve exceptional mechanical and thermal isolation.

All 1800 Series transmitters include external push-buttons for device setup and calibration. If ordered with the appropriate output, they can also be programmed using HART® or Modbus. Additionally, they are available with 2, 3, or 5-valve manifolds. With a standard  $\pm 0.075\%$  accuracy, the SOR 1800 Series conventional transmitters are an exceptional solution for continuous pressure monitoring.

### Features

- Gauge Pressure Ranges
  - 1 psi to 1 psi through -14.5 psi to 14,500 psi
  - 6 kPa to 6 kPa through -100 kPa to 100 MPa
- Differential Pressure Ranges
  - 0.87 psid to 0.87 psid through -72.5 psid to 1,450 psid
  - 6 kPa to 6 kPa through -500 kPa to 10 MPa
- 4-20 mA with optional HART®, 1-5VDC low power or Modbus output
- $\pm 0.075\%$  accuracy (F.S.)
- Aluminum explosion proof housing
- Standard push-buttons for setup
- Optional integral LCD display
- EMC (EMI/RFI) protection
- ATEX / IECEx certified for intrinsically safe and flameproof applications
- CSA certified for explosion proof applications
- 3 year warranty

### How to Order

Below is the SOR quick select model number tree that provides you with all the options to configure and order a product for your application.

- You must select a designator for each component
- Reference tables, charts and additional information are provided throughout the catalog to help you make your selections, see pages noted in the tree.

See page 32 for agency and options.

### Ranges - PT

Designator	LRL	URL	Smallest Possible Span	Over Pressure
040	-5.8 psi (-40 kPa)	5.8 psi (40 kPa)	0.29 psi (2 kPa)	145 psi (1 MPa)

### How to Order

Below is the SOR quick select model number tree that provides you with all the options to configure and order a product for your application.

- You must select a designator for each component
- Reference tables, charts and additional information are provided throughout the catalog to help you make your selections, see pages noted in the tree.

See page 32 for agency and options.

### Ranges

Designator	LRL	URL	Smallest Possible Span	Max Static Pressure	Hi-Side Over Pressure	Lo-Side Over Pressure
	psid (kPa)	psid (kPa)	psid (kPa)	psi (MPa)	psid (MPa)	psid (MPa)
040	-5.8 (-40)	5.8 (40)	0.58 (4)	1450 (10)	1450 (10)	1450 (10)
250	-36.3 (-250)	36.3 (250)	3.63 (25)	1450 (10)	1450 (10)	72.5 (0.5)
01K	-72.5 (-500)	145 (1000)	14.5 (100)	1450 (10)	1450 (10)	72.5 (0.5)

To determine if desired Measuring Range is achievable for a specific range option:

1. Lower End of Measuring Range  $\geq$  LRL
2. Upper End of Measuring Range  $\leq$  URL
3. Measuring Range Span = Upper End – Lower End  $\geq$  Smallest Possible Span
